## Description:

IMG-BOX is a dead simple JavaScript plugin to display your image in a fullscreen [lightbox](#) popup.

## More features:

- Custom background overlay.
- Hides [scrollbar](#) when the lightbox is activated.
- Fade in/out animations.

## How to use it:

Just insert the JavaScript file into the document and we're ready to go.

```
<script src="img_box.js"></script>
```

Display the original image in the lightbox.

```

```

Display another image in the lightbox.

```

```

Customize the image lightbox by overriding the following options.

```
// background color
var bg_color_img_box = 'rgba(0,0,0,0.9)'

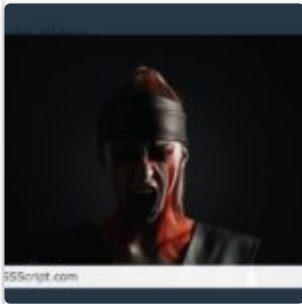

// hides scrollbars
var allow_hide_scroll_img_box = 'yes'

// enables fade in/out animations
var use_fade_inout_img_box = 'yes'

// animation speed
var speed_img_box = 0.08

// z-index
var z_index_dv_img_box = 999
```

Beautiful – this is absolutely what I needed! I’ve just spent the best part of 2 hours fiddling about with another plugin (and realised that I would have been better off just writing it myself...) and then I stumble on your solution. Great work!
